Now, I have the
following code, where, I
try to take the latest
version of each file: var
files = Directory.GetFiles(@"D:\Users\vj\Desktop\folder", "*.text"); var
latestversion = files
.Select(f => new {
filepath =
Path.GetFileName(f),
Version = FileVersionIn

```
fo.GetVersionInfo(f).FileVersion } ) .GroupBy(x => x.Version) .Select(x => x.OrderByDescending(y => y.Version).First()).ToList();
```

But unfortunately it returns this error: Error Could not find file 'd:\users\vj\Desktop\folder\TobiText.txt' Error Could not find file 'd:\users\vj\Desktop\folder\StephanText.txt' It returns an error on this line: `var latestversion = files`

```
.Select(f => new {  
    filepath =  
    Path.GetFileName(f),  
    Version = FileVersionIn  
fo.GetVersionInfo(f).Fil  
eVersion }) .GroupBy(x  
=> x.Version) .Select(x  
=>  
x.OrderByDescending(y  
=> y.Version).First())  
.ToList();
```

I am sure there is a problem with the path, how do I fix this? A: The root of the problem is this: @"d:\users\vj\Desktop\folder"

You're not escaping the

path properly and it's not a good idea to specify the path in this way. Use `Path.GetDirectoryName` instead. `FileInfo fi = new FileInfo(Path.GetDirectoryName(f));` Now, as for why you're getting this error: `Could not find 2d92ce491b`
